A new spine.cx

Spine.cx is about to get transplanted into a new body. Currently, spine.cx is running on an AMD K6/2 400 MHz chip with 384MB of RAM. A new machine has been set up with an AMD Athlon 1800+ chip and 500MB of RAM. In addition, I have two 40 gig mirrored drives instead of one 5-year-old 6 gig drive :)

In my initial tests, pages on the new server were loading almost 10 times faster than on the current server. Feel free to play with it. Post away, do whatever you want. when I switch it over for good, everything posted to the beta server will be overwritten with the database from the original.

Let me know if there are any problems.
