

# RealPlayer with no spyware

The BBC uses real media format to stream their videos and such, but were annoyed (as we are) that RealPlayer came bundled with spyware and other crap that nobody likes. They commissioned Real to make them a player with no ads or spyware, but because they are a public-service broadcaster, they can't advertise. Relax, it's not the end of the world, it's still crappy software.

Get it while it's hot.
